

ANTI-AGING TREATMENTS

Erectile Dysfunction Smartwave Therapy

It is estimated that over 50 percent of men between the ages 40 and 70 have erectile dysfunction issues. Low-intensity shock wave therapy has recently been developed for treating erectile dysfunction (ED). Smartwave Therapy is unique in that it aims to restore the erectile mechanism to enable natural or spontaneous erections. Smartwave therapy uses energy from acoustic waves to trigger a process called neovascularization in certain parts of the body, as well as to break up any scar tissue that can be found in patients with ED. When neovascularization occurs new blood vessels form. This helps improve blood flow to the region. Numerous studies using Smartwave Therapy for ED have shown a 75% success rate. This can be higher with the introduction of Exosomes; which include both blood vessel and nerve growth factors, proteins, and other growth factors.

Female Incontinence

Women experience incontinence twice as often as men do. Pregnancy, childbirth, menopause, and the structure of the female urinary tract account for this difference. Treatment for female incontinence uses Exosomes that are blood vessel and nerve growth factors, proteins and other growth factors. Which are directly injected either transurethral or periurethral.

Female Sexual Dysfunction

Many women experience problems with sexual dysfunction at some point, while others have difficulties throughout their lives. It is estimated to affect as much as 40 percent of all women, and can occur at any stage of life. Symptoms of sexual dysfunction are often persistent, recurrent difficulties with sexual response, desire, orgasm or pain. Treatment involves the use of Exosomes that include blood vessel and nerve and other growth factors, proteins that can increase sensation and pleasure.

Breast Rejuvenation

Breast Rejuvenation is for women who are happy with their breast size; but would love to rejuvenate the skin for youthful looks, restore fullness for healthy breasts and regain sensitivity in areas where it's diminished. It starts with drawing the patient's blood, spinning it in a centrifuge, adding Exosomes that include both collagen and dermal (skin) growth factors; then injecting them into the necessary areas.

Exosomes not only enhance the look, but actually produces new tissues in the area because all of the growth factors. This results in tighter younger looking skin, better cleavage and enhanced fullness.

Regenerative Facial

We use Exosomes and Platelet Rich Plasma (PRP), which include: blood vessel, collagen and dermal (skin) growth factors, proteins. Along with an innovative micro needling device that is both safe and effective. Giving you glowing, youthful and healthy skin! Exosomes cause rapid tissue regrowth where you can shed your old skin for new, younger appearing skin. Skin micro-needling is a ground breaking procedure in medicine for treating the appearance of: fine lines, wrinkles, acne scars, dark spots, and improvements of the skin's overall appearance. With a no treatment minimum required, each treatment can make you look younger and younger.

Regenerative Medicine is considered experimental by the FDA. These statements have not been evaluated by the Food and Drug Administration.
